

Chemical and pH Adjustment Skids

AquaTreat Mobile Chemical injection skids are designed to either manually or automatically adjust pH in a water stream and to maximize the system efficacy.

Based on water treatment applications, contaminant concentrations, and desired flowrates, pH adjustment and selection of appropriate equipment can easily be integrated into an existing or new water treatment system.

Chemical injection units can be not only used for pH adjustment it can also be used for any chemical dosing or control, it can be manually controlled or receive signal from on line sensors.
