

Oil/Water Separators

Oil/Water Separations systems have been designed to separate large amounts of oil which has been mixed in with water. Separators have been designed using Stokes Law. Oil/water separators are gravity feed systems, which allows the oil to rise to the top of the water surface then skimmed off and collected in a container. The water is then allowed to pass for further processing.

FIELD OF USE

OIL FIELDS

SMALL INDUSTRIES

PETROCHEMICAL

LARGE FUEL STATIONS

AquaTreat
systems can
handle up to
3000 Bpd
